

Q & A

Q. What if I drop something on my polished floor and chip the floor?

A. There are several products that can be used to fill the hole and then can be repolished to blend in with the existing floor. However, this will be a patch and can still be noticeable in the finished floor.

Q. Will my polished floor stain if I spill products on the surface?

A. All spills should be cleaned as soon as possible. Our polished concrete floors are coated with a stain resist product which helps protect against water and oil based stains. However, if a product (especially acid based) is left on for a longer period of time the polished concrete is vulnerable to staining.

Q. Are polished concrete floors slippery?

A. Polished concrete floors meet ADA requirements for slip resistance. Kept dry and clean, polished concrete floors are less slippery than your normal commercial tile.

Q. What is the cost of a polished concrete floor?

A. There are many options involved with a polished concrete floor. The pricing can range from \$2.50/ft² for a warehouse setting where little edge grinding is involved all the way up to \$10.00/ft² and beyond for a smaller project with coloring options. Each project is unique and we are happy to work with you to find the options that fits your needs. (Contact us today for a free estimate.)

Q. Can polished concrete be used outside?

A. Polished concrete is not recommended for exterior applications. However, there are settings where we would install an exterior polished floor. (Contact us for details.)

Q. Is the process of grinding and polishing messy?

A. The process is not dust-free. However, the machines are connected to vacuums that greatly reduce dust.

Q. How long does it take to polish a concrete floor?

A. From 200 ft² to 1000 ft² per day/per machine can be achieved. This average is subject to change depending on the layout of each individual floor.
