

FLOOR FINISHES

Polished Concrete Images is a leader in the concrete polishing industry. Our commitment to quality has been recognized nationally with a 2nd place finish in Concrete Décor's First Annual Concrete Restoration Contest. We work closely with our clients to fit them with the best flooring option that suits their requirements. Below you will find several popular flooring options that we can provide.

PCI Floor Finishes

IMAGE 400 – Provides a smooth, durable and easily maintained floor system that is very affordable. This level of finish starts with complete coating removal (if needed), and diamond grind leveling of the floor. After application of a concrete surface hardener the floor receives the initial polishing step which will give the floor a low sheen. This floor is an ideal low cost alternative for warehouses and shops. Over the life cycle of a standard floor, this system can save a significant amount over the maintenance cost of epoxy and acrylic coatings.

IMAGE 800 – This system adds one more polishing step to the Image 400 system and includes the application of a penetrating stain resist product. The finished product will have a uniform satin shine that is very serviceable as well as durable. This process is Ideal for retail space, showrooms, offices, shops, and warehouses.

IMAGE 1500 – The final polishing step pops a high gloss shine that reduced lighting requirements in some cases by as much as 30%. This system will clearly reflect images from all angles and provides showroom quality at an affordable price
